Alphabetical (Z-A)

Smart Animate

Matches layers between frames, recognizes the differences, and automatically animates them

Creating animated prototypes automatically, all in-app

Useful for loading, parallax, gestures, and more

Smart Animate

Plan ahead and accordingly

Ensure all layers are uniquely named, and consistent between frames

Major source of frustration when not properly set up

Figma Mirror

Available on iOS and Android

All major Figma features supported

Gives an accurate depiction of real apps

Stretches frames to the width of your device

Gives you vertical scrolling for taller frames

Adjust your designs to match your phone screen ratio

Summary

Advanced layouts with auto-layout

Advanced interactions

- overlays, smart animate, scroll interactions

Viewing prototypes on devices

Receiving and reviewing feedback

Shape creation with the pen tool and boolean operators

Plugin system
